

FEATURES

1. DOHC (Double overhead cam) three-cylinder engine which produces high performance.
2. Shaft drive mechanism which is extremely smooth, highly durable and exceedingly reliable.
3. Attractive muffler design blends three exhaust pipes into two mufflers. This results in high performance as well as a quiet exhaust sound.
4. Positive Crankcase Ventilation (PCV) device recirculates blow-by gases and reduces emissions.
5. Twin-disc front and disc rear brakes ensure safe braking.
6. Self-cancelling turn signal for increased safety. Multi-fuse circuit provides easy maintenance.
7. Light-weight cast aluminum mag-type wheels.
8. IC regulator is used to control the alternator output. There are no points as in the old contact type regulator so adjustment is unnecessary. There are no moving parts in this regulator and it is encased in resin so it is completely waterproof and dustproof.
